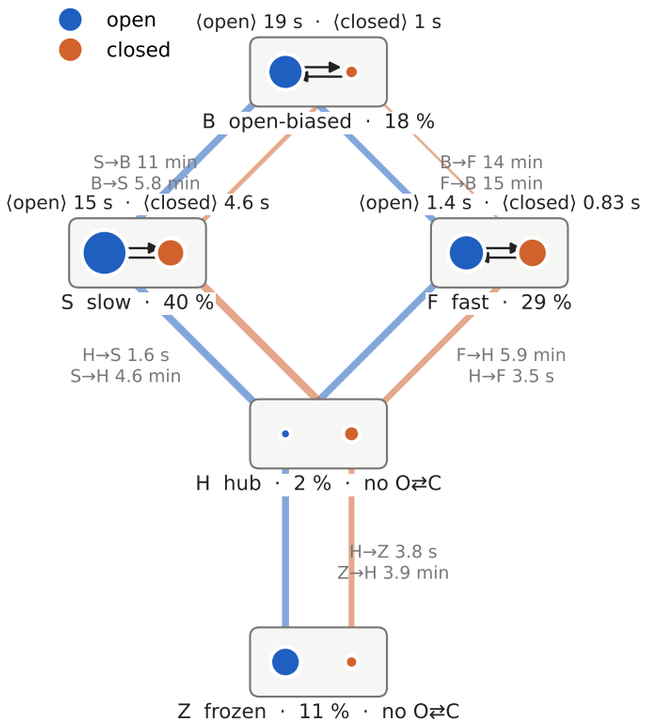
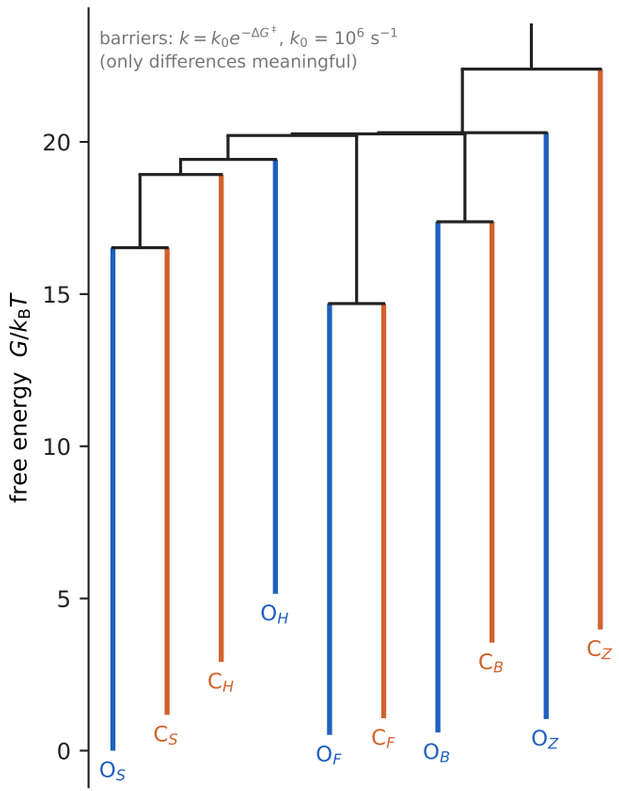
Hsp90 (apo) conformational kinetics: best model ringF1 + slow disorder (exact-likelihood ML, log L = -97918.9; 4 × 6 h, 25,571 dwells)

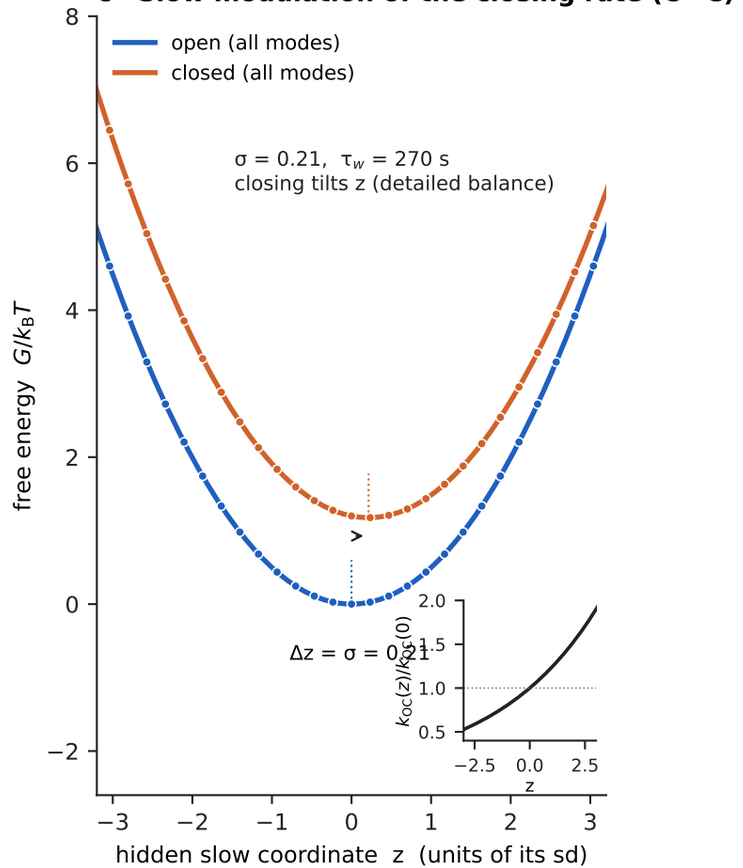
a Gating-mode network (ring + frozen branch)



node area ∝ population; line width ∝ log one-way flux $\pi_i k_{ij}$;
switching times via the open channel; mode-internal rates at z = 0

b Disconnectivity graph





c Slow modulation of the closing rate (O→C)
